

Cloud Software

Digital directory boards are the all new look, an easier way to display your tenant listing.

- ▶ Update tenant information quickly and simply
- ▶ Easily change colours, backgrounds and fonts
- ▶ Update the content anywhere, anytime
- ▶ Enhance the look of your building foyer

How it works. What it can do for you.

DigitalDirectoryBoards.com was designed with simplicity in mind. Simply login to your account to quickly add, remove and edit tenant details.

Via the DDB cloud server, you can connect to one directory, or save time by updating multiple directories.

Change the look of your directory with a layout designer which even lets you add your own corporate font and colour scheme. Display a tenant's logo for the ultimate personalised branding.

The software will operate on any Windows media player device or even on Samsung LCD panels via the built-in player. All you need to do is connect each directory to the Internet and here's the cool part, you can do it via the building Internet data or WiFi. You can even connect using 3G if the building Internet is not available.

Already have an existing screen? No problem. Any LCD screen of any size can be upgraded to DigitalDirectoryBoards.com
